

Day Webster moves to Cloud-Based Amazon WorkSpaces

Client Profile

Day Webster is a well-established recruiter, operating in the healthcare market, with numerous, mainly public sector clients. Their software systems were becoming outdated and unstable. Nuvens introduced Amazon Web Services to improve stability, performance and scalability.

Business Need

Day Webster had expanded its service portfolio and developed its own Software-As-A-Service (SAAS) solution for public sector clients. These customers not only expect Day Webster applications to work seamlessly, but they also depend on Day Webster's servers and network to be fast and reliable. The Managed Service Provider (MSP) and on-premise environment that Day Webster was using to run its infrastructure had become increasingly unstable and with no integration between the on-premise infrastructure, MSP Day Webster was struggling to put the SAAS solution into production until Nuvens introduced Amazon Web Services.

Solution

Amazon Web Services WorkSpaces is a cloud-based system, from one of the world's most dynamic companies. This application put Day Webster on an easy migration path to a VDI solution that was familiar to users and provided the same features as the existing Managed Services Provider. Crucial requirements for the new solution were: stability, performance and the ability to scale. Lee Mothersele, Senior Systems Engineer at Day Webster, says, "AWS WorkSpaces take the complexity out of displaying virtual desktop estates to users. Without the need for building in-house infrastructure to support a virtual desktop environment we deployed over 250 workspaces in just 24 hours."

Result

The majority of users now work from AWS Workspaces and Day Webster is currently deploying PColP (PC over IP) Zero Client terminals, so that users can have a rich, highperformance experience, regardless of task or location. Expensive desktop and laptop capital expenditure costs are now replaced with an easy-to-manage, easy-to-scale OpEx model. Users can now access their applications on all their devices, including mobile phones and tablets, and the IT department has reduced costs and time managing their existing on-premise infrastructure.

"WorkSpaces has taken Amazon away the complexity of building, maintaining and supporting our end users' desktops. Working with Nuvens simplified this process even further ... their no-nonsense, consultative approach helped us to see the reality behind the marketing blurb."

LEE MOTHERSELE - SENIOR SYSTEMS ENGINEER

About nuven

Nuven is a London-based IT consultancy practice helping clients maximise their investment in the public cloud. Our portfolio of services is designed to complement your existing IT team and empower them to make the right decisions based on our AWS experience and data driven approach.
